

Project 4

Sales Performance Dashboard -Decodelabs

Built during Week 4 of my data analysis internship, this Power BI dashboard analyzes sales performance from January 2023 to June 2025.

Key highlights:

\$1.26M in total revenue across 1,200 orders and 3,535 units sold.

Revenue peaked in June 2024 at \$68,069, showing a strong mid-year seasonal pattern.

2023 was the strongest full year at \$552K; 2024 came in at \$488K; 2025 (a partial year) sits at \$232K.

Chair and Printer were the top-performing products, each generating ~\$196K in revenue.

Payment methods are remarkably evenly distributed across Online, Cash, Credit Card, Debit Card, and Gift Card no single channel dominated.

Instagram leads acquisition with 259 orders, followed by Email (250) and Google (241).

A critical 19.2% delivery rate is a key operational red flag worth investigating.
